Unit of Competency

Functional Area: Operations Management

Code 105287L4 Range This unit of competency is applicable to practitioners in the import and export industry to execute projects and monitor project performance. It involves the identification of variance between actual and targeted performance. Level 4 Credit 6 (for reference only) Performance Requirement 1. Possess knowledge of project management • Use relevant tools to manage project schedule • Employ a range of skills to conduct variance analysis 2. Execute projects • Define each task to be performed on the projects • Develop documents including the information of project scope, deliverables, organisation units, resources, budgets for each work packages • Develop activity and resource usage schedule • Develop time phased budget to show expenditures across the project life • Determine the planned value of work scheduled (i.e., PV = adding the planned budget expenditures for each proceeding time period) • Determine the actual cost of work performed (i.e., AC = total actual costs of doing each task)	- :	I
Range This unit of competency is applicable to practitioners in the import and export industry to execute projects and monitor project performance. It involves the identification of variance between actual and targeted performance. Level 4 Credit 6 (for reference only) Performance Requirement 1. Possess knowledge of project management • Use relevant tools to manage project schedule • Employ a range of skills to conduct variance analysis 2. Execute projects • Define each task to be performed on the projects • Develop documents including the information of project scope, deliverables, organisation units, resources, budgets for each work packages • Develop activity and resource usage schedule • Develop time phased budget to show expenditures across the project life • Determine the planned value of work scheduled (i.e., PV = adding the planned budget expenditures for each proceeding time period) • Determine the actual cost of work performed (i.e., AC = total actual costs of doing each task) • Collect percent completed and determine the budgeted values for the tasks on which wor is being performed (i.e., EV = budgeted cost of the work completed) • Determine the cost variance (i.e., CV = difference between EV and AC) 3. Critically assess project status • Compare budgeted cost of work completed with the expected schedule value • Compare budgeted cost of work completed with the expected schedule value • Compare budgeted cost of work completed with the actual costs • Critically assess the project status and identify the gap • Develop effective means to fill the gap The integrated outcome requirements of this unit of competency are: • Capable of determining the schedule variance and cost variance • Capable of determining the schedule variance and cost variance • Capable of determining the progress of projects • Capable of identify performance gap and develop means to fill the gap	Title	Execute project and monitor project performance
Projects and monitor project performance. It involves the identification of variance between actual and targeted performance. Level 4	Code	105287L4
Credit 6 (for reference only) Performance Requirement 1. Possess knowledge of project management • Use relevant tools to manage project schedule • Employ a range of skills to conduct variance analysis 2. Execute projects • Define each task to be performed on the projects • Develop documents including the information of project scope, deliverables, organisation units, resources, budgets for each work packages • Develop activity and resource usage schedule • Develop time phased budget to show expenditures across the project life • Determine the planned value of work scheduled (i.e., PV = adding the planned budget expenditures for each proceeding time period) • Determine the actual cost of work performed (i.e., AC = total actual costs of doing each task) • Collect percent completed and determine the budgeted values for the tasks on which work is being performed (i.e., EV = budgeted cost of the work completed) • Determine the schedule variance (i.e., SV = difference between EV and PV) • Determine the cost variance (i.e., CV = difference between EV and AC) 3. Critically assess project status • Compare budgeted cost of work completed with the expected schedule value • Compare budgeted cost of work completed with the actual costs • Critically assess the project status and identify the gap • Develop effective means to fill the gap Assessment Criteria Assessment Criteria The integrated outcome requirements of this unit of competency are: • Capable of determining the schedule variance and cost variance • Capable of monitoring the progress of projects • Capable of identify performance gap and develop means to fill the gap	Range	
Performance Requirement 1. Possess knowledge of project management • Use relevant tools to manage project schedule • Employ a range of skills to conduct variance analysis 2. Execute projects • Define each task to be performed on the projects • Develop documents including the information of project scope, deliverables, organisation units, resources, budgets for each work packages • Develop activity and resource usage schedule • Develop time phased budget to show expenditures across the project life • Determine the planned value of work scheduled (i.e., PV = adding the planned budget expenditures for each proceeding time period) • Determine the actual cost of work performed (i.e., AC = total actual costs of doing each task) • Collect percent completed and determine the budgeted values for the tasks on which work is being performed (i.e., EV = budgeted cost of the work completed) • Determine the schedule variance (i.e., SV = difference between EV and PV) • Determine the cost variance (i.e., CV = difference between EV and AC) 3. Critically assess project status • Compare budgeted cost of work completed with the expected schedule value • Compare budgeted cost of work completed with the actual costs • Critically assess the project status and identify the gap Assessment Criteria The integrated outcome requirements of this unit of competency are: • Capable of determining the schedule variance and cost variance • Capable of monitoring the progress of projects • Capable of identify performance gap and develop means to fill the gap	Level	4
1. Possess knowledge of project management • Use relevant tools to manage project schedule • Employ a range of skills to conduct variance analysis 2. Execute projects • Define each task to be performed on the projects • Develop documents including the information of project scope, deliverables, organisation units, resources, budgets for each work packages • Develop activity and resource usage schedule • Develop time phased budget to show expenditures across the project life • Determine the planned value of work scheduled (i.e., PV = adding the planned budget expenditures for each proceeding time period) • Determine the actual cost of work performed (i.e., AC = total actual costs of doing each task) • Collect percent completed and determine the budgeted values for the tasks on which work is being performed (i.e., EV = budgeted cost of the work completed) • Determine the schedule variance (i.e., SV = difference between EV and PV) • Determine the cost variance (i.e., CV = difference between EV and AC) 3. Critically assess project status • Compare budgeted cost of work completed with the expected schedule value • Compare budgeted cost of work completed with the actual costs • Critically assess the project status and identify the gap • Develop effective means to fill the gap Assessment Criteria The integrated outcome requirements of this unit of competency are: • Capable of determining the schedule variance and cost variance • Capable of monitoring the progress of projects • Capable of identify performance gap and develop means to fill the gap	Credit	6 (for reference only)
 Criteria Capable of determining the schedule variance and cost variance Capable of monitoring the progress of projects Capable of identify performance gap and develop means to fill the gap 		 Possess knowledge of project management Use relevant tools to manage project schedule Employ a range of skills to conduct variance analysis Execute projects Define each task to be performed on the projects Develop documents including the information of project scope, deliverables, organisation units, resources, budgets for each work packages Develop activity and resource usage schedule Develop time phased budget to show expenditures across the project life Determine the planned value of work scheduled (i.e., PV = adding the planned budget expenditures for each proceeding time period) Determine the actual cost of work performed (i.e., AC = total actual costs of doing each task) Collect percent completed and determine the budgeted values for the tasks on which work is being performed (i.e., EV = budgeted cost of the work completed) Determine the schedule variance (i.e., SV = difference between EV and PV) Determine the cost variance (i.e., CV = difference between EV and AC) Critically assess project status Compare budgeted cost of work completed with the expected schedule value Compare budgeted cost of work completed with the actual costs Critically assess the project status and identify the gap Develop effective means to fill the gap
Remark		 Capable of determining the schedule variance and cost variance Capable of monitoring the progress of projects
	Remark
