Unit of Competency

Functional Area: Strategic Management

| Range This unit of competency is applicable to practitioners in the import and export industry in establishing steps to conduct environmental audits. Level 5 Credit 9 (for reference only) Competency Performance Requirement 1. Possess knowledge of environmental audits • Describe the process of environmental audits • Describe tinternational and local environmental regulatory requirements • Use a range of methods and techniques for environmental audit, e.g., observation and sampling survey 2.1. Prepare for environmental audit • Identify relevant code of conduct and regulatory requirements pertinent to the import and export operations • Identify technical and/or calibration requirements required to be audited • Identify work processes, facilities, and documents required to be audited • Identify exportaite schedule for audit • Plan audit schedule to ensure that relevant procedures are conducted within agreed time intervals and timeframes • Adjust the frequency of audit to ensure minimal disruption to the business operation • Contact appropriate personnel and make the audit appointments 2.2. Perform environmental audit • Confirm operational procedures and assessment methods for the environmental audit • Collect relevant information and provide preliminary results • Analyse the information, e.g., conduct observations, data and document collection, and measure air quality • Analyse the information and provide pr | Title | Conduct environmental audits |
